ear floodplain levels to account for future sea level rise. This strategic planning strengthens infrastructure
resilience, helping facilities withstand stresses and minimize potential damage. 23 As part of our focus on
continuous improvement, we made enhancements to our emissions calculation methodology in alignment with the
Greenhouse Gas Protocol. As a result, we recalculated emissions for historical years, includi...

VERDICT

GE Aerospace devotes the most attention to ghg emissions (scope 1 & 2) (depth 0.70), though its coverage runs more narrative than numeric; the gap to the group tail (Axon Enterprise, 0.45) is real but rhetorical depth should not be mistaken for performance. Credit where due: GE Aerospace goes beyond the standard report here, publishing a dedicated climate/TCFD report and a standalone data supplement - over-delivery of this kind is a stronger signal than polished prose.
