

GHG emissions (Scope 3)

SUE report card - Aerospace & Defense | Value-chain emissions: suppliers, product use, logistics
796 of 3371 passages are about this category (PCA projection)

KEY PASSAGES (the evidence the verdict leans on)

[1] L3Harris - 2025 L3Harris_2025_Sustainability_Report.pdf (p.16) - score 0.77

GHG emissions produced in a company's value chain, that a company neither owns nor has direct control over, but still result from a company's actions. We report enterprise- wide Scope 3 emissions from three sources: activities related to fuel and energy not related to Scopes 1 or 2, business travel and employee commuting. The United Kingdom requires companies with local operations to report Scope 3 emissions from ups...

[2] L3Harris - 2025 L3Harris_2025_Sustainability_Report.pdf (pp.16-17) - score 0.73

dios, to enhance our data related to Scope 3, Category 11: Use of Sold Products. In addition to calculating emissions for the product line, we focused on building a scalable process to obtain data for other product lines. Calculating emissions for certain product categories is challenging due to the technical complexity and diversity of our product portfolio and the limited availability of standardized methodologies....

[3] Boeing - Boeing_GHG_Emissions_Supplement.pdf (p.5) - score 0.72

re from sources that are not under Boeing's operational control, and instead occur in the value chain. There are 15 categories of Scope 3 emissions, 12 of which are applicable to Boeing. In 2025, we performed a relevancy assessment following GHGP guidelines and determined Category 11 (Use of Sold Products) is the sole relevant category, accounting for approximately 96% of our Scope 3 emissions. However, in support of...

[4] Boeing - Boeing_TCFD_Report.pdf (p.11) - score 0.71

ess to the GHG reduction and natural gas intensity goals is based on an updated 2023 baseline, which is pending reverification. 5. The boundary is all major manufacturing locations, including all majority-owned subsidiaries, representing 77.9% of total operations. Major manufacturing: >100,000 sq. ft of factory and laboratory space; intensity measure used is square footage. Boeing tracks and discloses Scope 1, Scope 2...

VERDICT

GE Aerospace leads the peer group on ghg emissions (scope 3) (depth 0.65 vs. group tail 0.48), and its passages above are noticeably more concrete than the group norm. Credit where due: GE Aerospace goes beyond the standard report here, publishing a dedicated climate/TCFD report and a standalone data supplement - over-delivery of this kind is a stronger signal than polished prose.
