

Hazardous waste & materials

SUE report card - Aerospace & Defense | Waste generation, recycling, chemical management
272 of 3371 passages are about this category (PCA projection)

KEY PASSAGES (the evidence the verdict leans on)

[1] Boeing - 2025 Boeing_2025_Sustainability_Report.pdf (p.56) - score 0.79

nd streamlined inventory management and supplier packaging to reduce waste. Management of Hazardous Waste and Chemicals We work to responsibly manage hazardous waste and chemicals in the value chain. We generate hazardous waste primarily from a variety of research, manufacturing and facilities maintenance processes. Hazardous waste disposal may be reduced upstream and downstream through on-site or off-site regenerati...

[2] Northrop Grumman - 2025 Northrop_Grumman_2025_Sustainability_Report.pdf (p.15) - score 0.77

ur business while reducing our impact. Compared to 2024, our disposed waste decreased 6% in 2025, despite growth in our business. This was primarily driven by significant waste management improvements, including recycling additional waste streams and program activity reductions at our largest manufacturing sites. We continuously assess waste streams at our sites and focus on maximizing site-level waste management pra...

[3] Boeing - 2026 Boeing_2026_Global_Sustainability_Report.pdf (p.47) - score 0.76

through processes that extend the useful life of those chemicals to avoid creating hazardous waste. We look to reduce hazardous waste in upstream activities by preventing or reducing the amount of hazardous waste generated through extending system life through contaminant removal. We are also working to identify less- or non-hazardous products and processes where feasible. Downstream, we look at hazardous waste gener...

[4] Boeing - 2026 Boeing_2026_Global_Sustainability_Report.pdf (p.48) - score 0.76

o protect the land, water and air in our communities by reducing waste from worksites and our supply chain. We use the ISO 14001 Environmental Management Systems standard to target continuous improvement opportunities, enhance environmental performance and meet compliance obligations. We seek to prevent waste from going to landfills and to capture opportunities to return or reuse materials both internally and externa...

VERDICT

Boeing leads the peer group on hazardous waste & materials (depth 0.72 vs. group tail 0.46), and its passages above are noticeably more concrete than the group norm. Credit where due: Northrop Grumman goes beyond the standard report here, publishing a dedicated climate/TCFD report and a full GRI/SASB reporting index - over-delivery of this kind is a stronger signal than polished prose.
